

HuFa-complex

Phospholipid and HUFA are essential components for the growth development of shrimp. Shrimp grow faster and healthier because of phospholipid, without its helps, the vital cholesterol and essential fatty acids cannot work properly. Physiologically, HUFA is a group of functional fatty acid that contributes to the permeability and elasticity of a cell membrane. The portion of omega-3 is always treated as an essential criterion in feed quality. DHA and EPA are fundamental to shrimp growth and their survival rate. This product can be regarded as an emulsify agent as well.

HuFa-complex is an innovative product that is rich in Phospholipid and HUFA essential for growth promoting in shrimp. Its remarkable physiological roles are most probably associated with hemolymph lipoproteins and the transport of lipids including cholesterol. This product makes the pellet feed processing efficient and easier. In addition, the emulsify property helps in less leaching of water-soluble vitamins in shrimp feed.

Obtainable in dense liquid form.

- Rich in Phosphatidylcholine
- High in DHA and EPA
- Improves Growth & Weight Gain
- Better Health & Survival Rate
- Nutrients Transporting
- Prevents Water-Soluble Nutrients Leaching
- Essential Component of Cell Membrane

Smooth in Pelletting

Ingredients:

Phosphatidylcholine,
Phosphatidylinositol,
Phosphatidylethanolamine,
EPA & DHA etc.

Usage and Application:

0.2~0.5 kg / 20 kg of Feed
A diet with balanced amino acids may help this product to reach its maximal performance

Packaging:

200 kg / Drum

Storage:

This product should be stored in a cool dry place.
